

# TRUCKEE RIVER CURRENTS

SUMMER 2015

## We work for the watershed. It's our nature.

We work for the watershed; she's truly our client. Everyone else—the bugs, beavers, birdwatchers and bicyclists (and you)—benefits. We're working for a better future. Ours. Yours. For generations to come. We find solutions that respect all viewpoints, from nature-lovers to land developers.

**Projects.** We spearhead large-scale restoration projects to reverse historic land-use impact. Construction on the Middle Martis Creek Wetlands Restoration project begins this summer. Read more on page 4.

**Policies.** We influence emerging policies to mitigate present-day risk to our environmental future. Watercraft inspections have been mandatory for launching into Donner Lake since 2014. Users of local waterways are doing their part to stop the spread of aquatic invasive species. Read more on page 8.

**People.** We engage people from all age, interest and economic backgrounds to be part of the solution. Through River-Friendly Landscaping, significant water quality improvements are being made, one property at a time. Read more on page 3.

### COORDINATING COMMITTEE

**Richard Anderson**

Chair, Truckee River Basin Water Group

**John Eaton**

Vice Chair, Truckee River Basin Water Group

**David Lass**

Chair, Projects and Assessments Committee

**Robie Litchfield**

Chair, Truckee River Day Steering Committee

**Joanne Roubique**

Chair, Watershed Issues Forum

**Jacqui Zink**

Vice Chair, Projects and Assessments Committee

### BOARD OF DIRECTORS

Organizations are for identification purposes only

**Jeff Brown**

UC Berkeley, Sagehen Creek Field Station

**Gayle Dana**

Desert Research Institute

**Marilyn Disbrow**

Sierra Watershed Education Partnerships

**Dave Giacomini, Treasurer**

Sierra Mountain Mortgage

**Jake Hudson, Chair**

Holdrege & Kull

**Michael Park, Vice Chair**

Jody Poe, Secretary

Media Recruiters

**Deb Ryan**

Holdrege & Kull

**Gail Stephens**

Happily retired

**Janet Zipkin**

### STAFF

**Phoenix Anthony**

Conservation Assistant

**Erin Casey**

Director of Land Use Compatibility

**Beth Christman**

Director of Restoration Programs

**Brenda Gilbert**

Development Director

**Jeannette Halderman**

Program Manager

**Michele Prestowitz**

Program Manager

**Eben Swain**

Lead Conservation Assistant

**Lisa Wallace**

Executive Director

**Kathy Whitlow**

Office Manager

Printed in part with funding designated by grantors for community outreach.

## All in. Are you?

Join us in taking back The Truckee River's meadows, creeks, streams and ponds. Home to the bugs, fish, birds and...humans.

Our work helps brings them all back—all with commitment from people like you.

You in?

**Become a Weed Warrior** and help prevent and control invasive weeds in the Truckee River watershed. Call Jeannette at 530-550-8760 x6.

**Adopt-A-Stream**—it starts with the watershed and monitoring is a critical step!

**Chemical, physical, and habitat monitoring** happens four times a year, May through September. Training and equipment is provided. To join a team or adopt a stream, call Erin at 530-550-8760 x7.

**Biological aquatic monitoring** happens year round. Collection in the summer and identification in the winter. Call Beth at 530-550-8760 x1.

**TRWC Ambassadors** spread the word about our work. We're looking for individuals to help us invite others to a River Talk to learn more about our watershed. The River Talk is a one-hour virtual tour of a few of our projects. Call Brenda at 530-550-8760 x5.

**River-Friendly Landscaping** helps homeowners improve water quality by reducing sediment flowing from our yards into area creeks and streams. Call us today to get a free site evaluation to identify erosion sources on your property. To volunteer, call Erin at 530-550-8760 x7.

### Three simple steps to volunteer with the TRWC

**STEP 1** Sign up for our E-newsletter, *Truckee River Currents*.

**STEP 2** Find a program you're interested in and RSVP to the staff member.

**STEP 3** Mark your calendar and join us!

BETH CHRISTMAN

**Adopt-A-Stream volunteer Reenie McMains measures canopy cover at Cold Creek.**

JEANNETTE HALDERMAN

**Volunteer Weed Warrior Trisha Ruby removes Musk Thistle along the Truckee River at a Weed Pull event.**

# Tomorrow's too late: Homeowners are protecting the watershed today.

AT A GLANCE

**1000**  
Signups

**614**  
Site evaluations completed

**82**  
Rebates issued

**100+**  
Tons of sediment reduced per year

For more information, contact Erin at 530-550-8760 x7.

Tomorrow is too late. It's true.

The Truckee River's EPA Rating? Polluted.

Pollution in the form of sedimentation is the reason our Truckee River is listed as impaired by the Environmental Protection Agency (EPA). Improvements on even one property can make a difference.

With no erosion control measures on your residential property, an average of one ton of soil may be lost per year, per lot. No matter where you live in the watershed, this sediment eventually finds its way into our area streams and the Truckee River; it's a major source of pollution.

Area homeowners are taking back the area's meadows, creeks, streams and ponds. Through River-Friendly Landscaping, significant water quality improvements are being made, one property at a time.

Get a free site evaluation to identify erosion sources on your property. A \$1,000 rebate is available to help off-set the cost of installing erosion control measures. Contact Erin at 530-550-8760 x7.

*Funding for this project has been provided by donors of the Truckee River Watershed Council and through the State Water Resources Control Board and the U.S. Environmental Protection Agency under the Federal Non-point Source Pollution Control Program (Clean Water Act Section 319).*

KATHY WHITLOW

RFL participants Dot and Paul Ingels enjoy their River-Friendly backyard after completing work in 2013.

**Before:** Bare dirt on the sloping lot of this Tahoe Donner home necessitated steps to prevent erosion.

**After:** The homeowners have installed a permeable walkway, mulch, gravel, and vegetation to protect the previously bare soil. Water from the roof and uphill sources now stays on the property, soaking back into the ground.

DONNY TRIPLAT/NATIVE LANDSCAPES

# Entering the Construction Phase: Middle

TRUCKEE RIVER WATERSHED COUNCIL

Restoration will reduce flood velocities, preventing further erosion near the Middle Martis Channel.

## History

Prior to the construction of Highway 267 in the 1800s, Middle Martis Creek formed an alluvial fan, spreading among several channels in Martis Valley. When Highway 267 was constructed, the creek was confined to a single channel on the south side of the highway. The confinement of Middle Martis Creek to a single channel caused several significant problems including:

- Channel instability and erosion in the streams and meadows of the Martis Wildlife Area
- Degradation of 40-plus acres of meadow and wetland habitat
- Moderate flows overtop the channel and flow onto the highway
- Erosion of various access roads and trails in the area

## Restoration

In collaboration with several partners, foundations and landowners, the Truckee River Watershed Council will begin construction on the Middle Martis Creek Wetlands Restoration project this summer. Our work will restore an appropriate portion of the flow to the north side of Highway 267, while maintaining sufficient flow on the south side to support existing wetlands and riparian areas.

## THE LIFECYCLE OF A PROJECT

### Project Scoping

The first step in a restoration project is to identify the problem, what might be causing it, and what might be some solutions.

### Inventory and Analysis

Field surveys take place, historic and aerial photos are collected, hydrologic modeling is conducted, and historic and pre-historic sites are identified. The data are analyzed to understand root causes and constraints.

### Design

From the analysis, detailed plans for completing the project are developed.

### Permits

Working with the local, state and federal agencies, we complete environmental reviews, such as CEQA (California Environmental Quality Act) and NEPA (National Environmental Policy Act) and obtain permits needed to begin work.

### Construction

In this phase, the restoration work is implemented according to the project design and permits.

### Monitoring

Monitoring helps us understand compliance with the design and effectiveness of the restoration actions.

### Establishment

The restoration work is completed to the point where ongoing protection such as fencing is no longer needed, revegetation and other success criteria have been met, and the site is allowed to develop naturally.

PROJECT SCOPING

INVENTORY  
& ANALYSIS

# Martis Creek Wetlands Restoration

## Construction begins in 2015

Implementation of the project will be split into two seasons with construction beginning in 2015. When completed, the project will achieve significant watershed benefits including:

- Restoration of historic wetlands on the north side of Hwy 267
- Improvement in water quality through reduction of sedimentation
- Preservation of existing wetlands and riparian areas south of Hwy 267
- Elimination of erosion across the Waddle Ranch access road
- Protection of existing infrastructure and reduction of maintenance of Hwy 267, Sawmill Flat Road, and the Northstar golf course

The Watershed Council is the lead in coordinating the project and our partners. Project partners are Caltrans, Northstar at Tahoe, Northstar Community Services District, Truckee Donner Land Trust, Truckee Tahoe Airport District, and the U.S. Army Corps of Engineers.

*Funding for this project comes from the donors of the Truckee River Watershed Council, The Martis Fund, Northstar California, Northstar Community Service District, Overall Family Foundation, Truckee Tahoe Airport District, the Truckee River Fund, Placer County, and the State of California via Department of Fish and Wildlife and the Lahontan Regional Water Quality Control Board.*

*For more information on this project or others, contact Beth at 530-550-8760 x1.*

BETH CHRISTMAN

**Fill was placed in the channel during reservoir construction, causing downstream erosion. The fill will be removed to prevent future erosion.**

## What's on your bottom?

Zebra mussels  
are an example  
of an aquatic  
invasive species.

TRCD

## Keep Donner Lake blue.

Often in the shadow of iconic Lake Tahoe, Donner Lake and other local waterways outside the basin have finally gotten the recognition and support that they deserve. To protect the resiliency of our natural resources while supporting the vibrancy of our local community, watercraft inspections have been mandatory for launching into Donner Lake since 2014. The Truckee River Watershed Council and stakeholders saw the need to initiate a community wide approach to stop the spread of aquatic invasive species such as the quagga mussel, New Zealand mudsnail and Eurasian watermilfoil and recreational users of local waterways are doing their part! The collaborative process encompasses watercraft inspections (both mandatory and self-inspections), early detection monitoring, education and outreach.

Together, we can address the detrimental effects that invasive species can have on an aquatic ecosystem. The introduction and establishment of invasive species can alter natural ecosystem function, displace native species, increase pollutants such as algal blooms, damage boat propellers, and cause economic losses for the community (Timothy J. Caldwell and Dr. Sudeep Chandra, 2012).

*Thank you to the donors of the Truckee River Watershed Council.*

*For more information on aquatic invasive species, please call Erin at 530-550-8760 x7 or visit the Tahoe Resource Conservation District's website at [tahoercd.org/truckee-aquatic-invasive-species-program](http://tahoercd.org/truckee-aquatic-invasive-species-program).*

20  
YEARS

## Truckee River Day

was born when Alice Berg, Jim Plehn and Sarah Trebilcock organized the "first annual" in 1996. When 300 hundred people showed up, the founders realized they had touched a passion with locals and visitors alike. Every October since, 400 to 600 volunteers have worked at 10 to 12 restoration sites each year.

The projects achieve tangible results, inspiring long-time community members to stay involved and recruit new community members to participate. Hundreds of projects have been over the past 20 years from Squaw Creek to Donner Creek to Gray Creek to Perazzo Meadows.

Join us in taking back our meadows, creeks, streams and ponds. Home to the bugs, fish, birds and... humans. Our work helps bring them all back—all with commitment from people like you.

### You in?

*Thank you to the donors of the Truckee River Watershed Council, Northstar California and EpicPromise, Tahoe Oral Surgery and Implant Center, and the Truckee Donner Chamber of Commerce for support of Truckee River Day.*

*For more information on Truckee River Day, visit [truckeeriverwc.org](http://truckeeriverwc.org) or call Beth at 530-550-8760 x1.*

**Sunday, October 18, 2015**

**A day of river, meadow, and wetland restoration**  
**Registration required: [truckeeriverwc.org](http://truckeeriverwc.org)**

*All in. Are you?*

STEFAN MCLEOD
