

Beth Christman – Sr. Director of Restoration

Beth holds her B.A. in Biology from UC Santa Cruz and her PhD in Ecology and Evolutionary Biology from Cornell University. After finishing grad school, she moved back to Truckee and was hired as employee #2 of the Watershed Council as a program manager. She was inspired by the mission of TRWC and the work that had been accomplished mostly through volunteer efforts. Today, she runs various programs, leads restoration projects, and engages in policy work around the Truckee River and its tributaries. Some of Beth's favorite memories from project work over the years are seeing native plants back where they haven't been, birds returning to use sites that haven't provided quality habitat for decades, or streams working the way they should. Outside of work you can find Beth skiing in the winter and camping in the summer!
