

Eben Swain - Project Director of Restoration

Eben holds his B.S. in Forestry and Natural Resources, Parks and Recreation Management and his Masters in GIS. Eben began collaborating with TRWC in his previous role at the Tahoe Resource Conservation District. He developed a deep respect for the Watershed Council during that time and was excited to join TRWC to help with the River-Friendly Landscaping program in 2014. Though the River-Friendly Landscaping program has ended, Eben has continued identifying, designing, and implementing stream, meadow, and forest health restoration projects. He additionally manages the Adopt-a-Stream program coordinating volunteer teams, collecting water quality data, and monitoring our local creeks, streams, and rivers. He loves that his role as a Project Director allows him to build a very intimate knowledge of the ecological processes, opportunities, and constraints that are unique to each project by seeing it through from start to finish. Outside of work you can find Eben snowboarding in the winter and rafting or paddleboarding in the summer!
